Glioma	72.0%
Predicted Diagnosis	Confidence Score

Class Probabilities:

Class	Probability (%)
Glioma	72.00%
Meningioma	12.00%
No Tumor	10.00%
Pituitary Tumor	6.00%

MRI Scan Analysis

Model Comparison

Model	Prediction	Confidence
Svm	Glioma	68.5%
Random Forest	Glioma	71.0%

Clinical Impression (AI-Generated)

The MRI analysis indicates findings consistent with a Glioma tumor, a type of tumor that arises from the glial cells of the brain. Gliomas are the most common primary brain tumors, accounting for approximately 33% of all brain tumors. They are classified by grade (WHO Grade I–IV), with higher grades indicating more aggressive behavior. The detected confidence level suggests a notable presence of characteristic imaging features such as irregular borders, signal intensity changes, and possible surrounding edema. Immediate referral to a neuro-oncologist is strongly recommended for confirmatory biopsy, MR spectroscopy, and treatment planning.

Model Confidence: 72.0%
